Laudescher LINEA Bespoke acoustic slatted panels with the purpose of managing the reflective nature of the walls within this main entrance area.

The extremely specific design of the wall panels here where each slat is a different thickness and depth as well and being chamfered, and on the returns these are mitred with each mitre being different to take into consideration the slat thickness and depth.

These panels work to absorb sounds and reduce the reflection so as to increase the calming effect of the area.
